

## AXIS Counter Receipting

As part of the AXIS total payments solution, AXIS Counter Receipting (AXIS CR) provides the capability to accept, process and receipt payments within a cash office setting anywhere within an organisation, interfacing directly with AXIS Income Management. Designed as a clean sheet approach to cash office payment collection, AXIS CR couples the best features of previous Academy systems with new innovations and improved functionality.

### Summary of Features

#### User access

Access to the system is password controlled, with advanced features such as prevention of repeat passwords and password expiry being built in. Administrators can limit individual user access to selected options within the application and these can then be accessed via mouse, shortcut keys or drop-down menus.

#### Debit and credit card payments

Uses APACS 30/29 authorisation protocols to accept card payments, with support for either keyed, swiped or chip & PIN entry.

#### Card surcharges

Allows the cost of processing debit/credit card payments to be passed onto the customer.

#### Euro compliance

Designed to support any potential developments to UK government legislation, one such example being dual currency handling. This facility has already been deployed in Ireland, during the transition from legacy currency to the Euro.

#### Advanced on/offline operation

Developed to provide seamless offline processing and reconnection functionality.

#### User installation and configuration

Users can easily install, configure, maintain and administer the system, without the need to purchase additional services. Changes are maintained centrally, with routines provided to update local files and reflect changes. Provides a simple upgrade facility for use when installing new releases of software.

#### Peripheral devices

Allows for the integration of input and output devices, improving the speed of processing and resultant service levels. Includes USB support (for card readers and OCRs), cash tills and 'small footprint' printers.

#### Online help

Easy to use online help, improving productivity and reducing the requirement for specialist training and helpdesk assistance.

#### Technical information

- Developed using industry standard Visual Basic 6 (VB6)
- Uses local Microsoft Access database
- Client access supported on Windows 98, 2000, NT and XP operating systems
- Online help and technical documentation.

#### The bigger picture

AXIS CR is part of the AXIS total payments solution providing revenue collection services anytime, anywhere and for anyone.
