

AXIS Income Management

As part of the AXIS total payments solution, the AXIS Income Management (AXIS IM) module provides a revenue collection portal capturing payments processed from any AXIS payment module or third party system. Available on both Windows Server and UNIX platforms, AXIS IM provides an organisation with the option to choose a solution to complement their own IT strategy.

Summary of Features

AXIS payment modules

Captures payments made via all the AXIS payment modules. This provides a central transaction database to control income and reconciliation.

Modular system design

Enables the organisation to define the requirements of their IM solution, offering import, validation, export and reconciliation functionality.

Import of third party files

Provides validation of third party payment files, ensuring accurate account posting to host applications and a single point of transaction enquiry.

Revenue distribution

Produce single or multiple daily files for onward posting to host applications, including financial management, revenues and housing systems. This eliminates the need for separate cash dissemination solutions.

Comprehensive reporting

Includes a powerful, yet easy to use, reporting tool, allowing users from differing departments to use the single transaction database to produce daily, reconciliation, management, exception and audit reporting.

Standard office products

Allows information transfer to other office products such as Microsoft and Lotus standard applications. Provides the facility to email exports, reports and external files in a variety of formats including XML.

Self-tailoring and consultancy

Designed to allow an organisation's own staff to use the tools available in order to define simple and complex interfaces to meet their exact requirements. Our consultants can assist with this process.

Scheduling

Provides a scheduling tool, which allows end of day files to be processed by host applications at specific times of day. This is of particular importance where penalty-based service level agreements with third parties exist. Also applies to other recurring jobs (reports, backups etc).

Technical information

- Operates on UNIX or Windows Server (2000 or 2003) environments
- Developed using industry standard Visual Basic 6 (VB6)*, C** and .net*
- Uses SQL* and C-tree** databases
- Offers ODBC compliance on SQL* and (optionally) on C-tree**
- Uses Crystal Reports* and R-tree** reporting tools
- Client access supported on Windows 98, 2000, NT and XP operating systems
- Online help and technical documentation
- Integrates with MS Office

**Windows Server option

**Unix option

AXIS Payment Management

The bigger picture

AXIS IM is part of the AXIS total payments solution providing revenue collection services anytime, anywhere and for anyone.
